

Ana Case Study

Quality of Service

25-SEAT OFFICE, w/HPBX

One of our business partners is always looking for ways around putting in high-cost fiber for their customers.

In this case, a local auto repair chain was looking to put in SIP for their voice. They were faced with three options: Converge their networks over high-cost fiber, use ADSL for Internet and a T1 for voice, or choose Ana.

Smartly, they chose Ana and combined their Internet and voice over 3 simple ADSL connections. We put QoS over their voice application so that it was unaffected by any amount of Internet traffic.

The Results:

Guaranteed Quality of Service for Voice.

Savings of over \$1200/Month.

At another location, they use Ana™ QoS for 3 voice lines, a fax, and an ATM over one ADSL connection.
