

# Affordable Quality For Your Business.

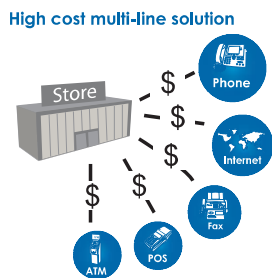

Run Multiple Applications over one connection with Ana Network Technology

Your business runs smoothly day-to-day, but increased communication costs are keeping you from realizing the profit margin you expect. It's a Catch-22: you need the services to get the business, you need the business to afford the upgraded service. We developed a system that enables merchants to pool their communication lines, so that all of their systems run over one Internet connection - keeping costs low, bandwidth speeds and reliability high.

We can help you keep your critical-applications up and running so that you can focus on your customers.

## Typical merchant setup

## Ana merchant solution

Low cost single-line solution

## A full line of Merchant Packages.

We developed a series of solutions aimed at getting you the most out of your communications spend. If your business relies on Internet, Fax, phone, POS, or any of these services, we can help you keep your costs low, because we believe that your major expense shouldn't be your communications.

## Customize your package with add-ons.

Though we packaged our merchant solutions, we know that no two locations are the same. Whether it's adding a toll-free number, increasing long-distance minutes, mailbox extensions or a Direct Inward Dialing number, we can help you fit the solution to meet your needs. We'll get your business running cost-effectively.
