

GLOBAL SERVICES

IoT Installation and Management Services

GT Global Networks has been keeping organizations North American wide connected for well over a decade.

Our experienced technicians are trained to handle any and all of your IoT requirements, new build installations, site surveys, repair and replace as well as general maintenance.

Our team of Solutions Architects and technicians will ensure that your system is designed and optimized to provide the ultimate performance. We can provide various types of connectivity and installation services, depending on your needs.

IoT Overview

When it comes to the installation of devices that drive an Internet of Things (IoT) ecosystem, **you can count on GT Networks to deliver expert management and execution of the project.**

Whether your IoT device connection is wired or wireless, and its power source is hard-wired or battery-powered, **we'll oversee every aspect of getting it live and feeding data to your chosen network.**

IoT Installation SERVICES OFFERED

1. IoT Device Installations

Whether you wish to monitor a workforce, assets, site locations, or operations, we can help you roll out a national IoT program promptly so your company can quickly gain the actionable insights that the IoT devices are meant to deliver.

2. IoT Device Decommissions

When IoT devices have reached the end of their life cycle and need to be either replaced or decommissioned, GT Networks can oversee and manage that project for you.

3. IoT Wireless Networks

When it comes to wireless networks, GT Networks has experience in connecting IoT devices to LPWAN, Cellular 3G/4G/5G, Zigbee, Bluetooth, Wi-Fi, and RFID. In addition, GT Networks can also assist in the installation of these various types of wireless networks for your site locations.

4. IoT Wired Networks

GT Networks is experienced with installing structured cabling and can design and build the infrastructure for your wired IoT devices.

5. IoT Security

Security support is needed for IoT devices to maintain a proper security composure. Lack thereof could cause a wide variety of security issues. Unprotected IoT devices leave your organization vulnerable to attacks.

IoT Professional and Managed SERVICES

The GT Global team is ready to assist with all of your technical requirements.

Whether you are looking for a short term project or on-going management and maintenance our dedicated team of technicians are ready to help.
